

How to Secure Your Mobile Device

- 🔒 Always use a passcode lock to secure your mobile phone and other devices.
- 🔒 Always log out completely on your mobile banking session.
- 🔒 You can install mobile security software to protect your device from malware.
- 🔒 Keep your phone and apps updated.
- 🔒 Do not store sensitive information on your mobile phone. (e.g. passwords, social security numbers)
- 🔒 Contact your financial institution if your phone is lost/stolen.
- 🔒 Be careful when entering in sensitive information on your device; you never know who is watching.
- 🔒 Avoid opening suspicious attachments in emails and texts (AKA Smishing), especially when it's someone you do not know.
- 🔒 Contact your service provider if you receive an email saying your device is infected; this is a common attack method.
- 🔒 Do NOT perform banking transactions over a public Wi-Fi. They are not very secure. Use your mobile network instead, when conducting these transactions.
- 🔒 Report any suspected fraud to your financial institution immediately.
